**SAGE REFERENCE'S UNPRECEDENTED & INTERDISCIPLINARY  
ENCYCLOPEDIA OF TIME: SCIENCE, PHILOSOPHY, THEOLOGY, & CULTURE  
STRENGTHENS OUR GRASP ON THE FLUX OF REALITY**

*Los Angeles, London, New Delhi, Singapore, and Washington, DC (October 31, 2008)*—What is time? Did it ever begin? Will it ever end? These are profound questions asked by serious thinkers over the centuries. Yet as humans continue to explore and understand this universe, the older, larger, and more peculiar we find it to be.

SAGE Reference's innovative, interdisciplinary, new ***Encyclopedia of Time: Science, Philosophy, Theology, & Culture*** surveys the major facts, concepts, theories, and speculations infusing our present and past comprehension of time. This wealth of accessible, A-to-Z entries covers prehistoric time through the present day and comes from scholars around the globe who examine the full range of academic disciplines and the creative arts. The result is an in-depth resource focusing on fascinating topics, such as the following:

- historical ways of thinking about time, such as philosophies from early Christianity, the Italian Renaissance, the Age of Enlightenment, and many other periods
- insights of monumental figures, such as evolutionary biologist Charles Darwin, physicist Albert Einstein, and theologian Pierre Teilhard de Chardin
- important writings about time, by authors such as Isaac Asimov, Samuel Taylor Coleridge, Fyodor M. Dostoevsky, and Francesco Petrararch
- artistic portrayals of time, such as Michelangelo's ceiling of the Sistine Chapel and Salvador Dalí's *Persistence of Memory*
- cultural conceptions of time, such as those of the Aztecs, Buddhists, Egyptians, Ethiopians, Islamics, Hindus, Navajos, and many other societies

All public and academic libraries will be quick to place SAGE's ***Encyclopedia of Time: Science, Philosophy, Theology, & Culture*** on their shelves so patrons have access to its in-depth understanding and broad appreciation of the nature of reality—and the pervasive influence of time on all objects and events within it.

Editor H. James Birx, PhD, DSci, is professor of anthropology at Canisius College in Buffalo, New York.

**SAGE** is a leading international publisher of journals, books, and electronic media for academic, educational, and professional markets. Since 1965, SAGE has helped inform and educate a global community of scholars, practitioners, researchers, and students spanning a wide range of subject areas including business, humanities, social sciences, and science, technology and medicine. A privately owned corporation, SAGE has principal offices in Los Angeles, London, New Delhi, Singapore, and Washington, D.C. [www.sagepublications.com](http://www.sagepublications.com)
