**2,000 PAGES OF CONTENT FROM VERILOGUE ADDED TO
MENTAL HEALTH RESEARCH AND TRAINING DATABASE**

Los Angeles, London, New Delhi, Singapore, and Washington, DC (September 23, 2008) – SAGE and Alexander Street Press' unique research and training mental health resource, [Counseling and Psychotherapy Transcripts, Client Narratives, and Reference Works](#), is being enhanced by the addition of hundreds of new transcripts from Verilogue over the next year.

Verilogue digitally records live interactions between patients and physicians and, once anonymized, the transcripts are provided to professionals and students in the mental health discipline to enhance understanding of disease and treatment. Now, with this new agreement, database users will be able to research an additional 4,000 pages of content on topics such as depression, bipolar disorder, adult ADHD, and, for the first time, schizophrenia.

"Verilogue is excited to provide researchers with access to real, in-office psychiatrist-patient conversations," said Jamison Barnett, Verilogue Vice President and Co-founder. "This will provide educators and students with first-hand access to live patient cases, and the corresponding insights can be used to study, analyze, and improve physician-patient communications."

Created by SAGE and Alexander Street Press, *Counseling and Psychotherapy Transcripts, Client Narratives, and Reference Works* contains 40,000 pages of actual therapy sessions and first-person accounts, including first-person diaries and memoirs, letters, autobiographies, and oral histories, as well as 25,000 pages of SAGE reference works.

"*Counseling and Psychotherapy Transcripts, Client Narratives, and Reference Works* is filling a true research gap by offering the candid voice of the client," commented Stephen Rhind-Tutt, Alexander Street Press President. "The Verilogue doctor/patient transcripts are a natural addition to the therapy transcripts, client narratives, and other reference sources the database already contains."

"We're pleased to add the Verilogue transcripts to the database," added Alison Mudditt, SAGE Executive Vice President. "SAGE continually searches for ways to provide our users with a world-class research experience and these definitely help us reach that goal."

###

SAGE is a leading international publisher of journals, books, and electronic media for academic, educational, and professional markets. Since 1965, SAGE has helped inform and educate a global community of scholars, practitioners, researchers, and students spanning a wide range of subject areas including business, humanities, social sciences, and science, technology, and medicine. A privately owned corporation, SAGE has principal offices in Los Angeles, London, New Delhi, and Singapore. www.sagepub.com

Since 2000, **Alexander Street Press** has been bringing together the skills of traditional publishing, librarianship, and software development to create large-scale quality electronic collections in the humanities and social sciences. Today, Alexander Street Press offers more than 25 collections totaling many millions of pages, providing unique resources for scholarship. <http://www.alexanderstreet.com>

Verilogue brings patients, physicians and the healthcare industry together to share information, enhance disease understanding and participate in medical marketing research. Verilogue's patent-pending technology system captures nationwide information at the Point of Practice™ and enables physicians to digitally record conversations with patients. The physician, patient and caregiver information collected by Verilogue is made anonymous and used by the healthcare industry to further enhance their understanding of numerous diseases. www.verilogue.com
