FIVE NEW TITLES FOR SAGE-HINDAWI PARTNERSHIP

Los Angeles, London, New Delhi, Singapore, Washington DC (April 3, 2009) SAGE and Hindawi have announced the further expansion of their joint publishing collaboration, SAGE-Hindawi Access to Research. Five new titles are now live on the SAGE-Hindawi platform: *Journal of Nucleic Acids*; *Stem Cells International*; *Journal of Amino Acids*; *International Journal of Alzheimer's Disease*, and the *International Journal of Evolutionary Biology*.

All five titles will be fully Open Access, and for an initial period, there will be no author fee charged for accepted papers.

The SAGE-Hindawi partnership was launched at the end of 2007, and the first two journals in the program were launched in 2008. SAGE-Hindawi are actively commissioning further journals, with an ambitious growth plan in place for the year.

"Both SAGE and Hindawi believe that the SAGE-Hindawi program will establish high quality, highly-ranked journals," said David Ross, Business Development Manager, SAGE. "The editorial procedures, including the peer review process, are robust, and our long term aim is to publish research of the highest quality. We're confident that these new titles are in fields where there is a high volume of research activity and funding available to support open access publishing."
