Submission guidelines

Submit manuscript

Please read the guidelines in full before submitting your manuscript. Manuscripts not conforming to these guidelines may be returned.

Submit Manuscript 

The *Industrial and Labor Relations Review (ILR Review)* publishes peer-reviewed, interdisciplinary research that advances new theory, presents novel empirical work, and informs organizational and public policy on the world of work and employment. Criteria for acceptance include fit, research quality and originality, and the significance of the contribution to the field. See our Aims & Scope webpage for more details. This journal is a member of the [Committee on Publication Ethics \(COPE\)](#).

The *ILR Review* will not consider any paper under simultaneous review by any other journal or publisher. Before submitting your paper, please follow these links for information on:

[Conditions of Publication and Data Policy](#)

[Editor Conflict of Interest Policy](#)

[Guidelines for Qualitative Research](#)

[Manuscript Style Guide for Authors](#)

[Reviewer Guidelines](#)

[Policy Guidelines on AI Use](#)

Submit manuscripts electronically through our website at

<http://mc.manuscriptcentral.com/ilrr>

If you encounter any technical problems,
contact our office at ilrr@cornell.edu or 607-255-3295.

The version of the paper you upload must be purged of all information identifying you, your coauthors, and your institution(s). Prepare a separate cover note or title page (which you can upload as a file separate from the manuscript and/or copy into the Cover Letter field) providing us with author name, current professional title, address, telephone number, and e-mail address for each author of the manuscript, along with any acknowledgments; this cover note will not be visible to referees.

Authors should familiarize themselves with [Sage's Accessibility Guidelines](#) to ensure their manuscripts meet recognized accessibility standards.

Length and Format

Manuscripts should adhere to a 10,000 maximum word count. This limit includes all text, tables and figures, footnotes, references, and appendices to be included in the article itself (i.e., not as an online supplement). For papers that exceed the limit, please state in your cover letter why a somewhat greater length is needed. Your AE will work with you on final length. Any supplemental tables may be posted as an Online Appendix. This online material will not count as part of the 10,000 word limit and will not be copyedited or formatted by our editorial office. Please submit your paper as a Word file—double-spaced, 12-point, Times New Roman font. Our system will convert your Word document to a PDF for the peer review process. If you work with LaTeX software, the system may have trouble accepting the files. Detailed instructions for LaTeX authors are available at <http://mchelp.manuscriptcentral.com/gethelpnow/training/author/>. Please contact us if you need assistance submitting a LaTeX manuscript. Although we can work with LaTeX and PDF files during the review process, should your article be accepted for publication we will then need a Word document for the production steps—copyediting and typesetting. Submitting Your Paper

Follow the on-screen instructions to create an account and/or to log onto your existing account at the <http://mc.manuscriptcentral.com/ilrr> website. (After you have an account, you will use that same information to log on each time you return to the site.) The system will guide you through the six-step manuscript submission process, prompting you for any information that may be missing.

What to Include

Title, Author(s), Abstract, and Acknowledgments

Provide the article title, authors' names, and abstract in the appropriate, separate fields of the webpage at the time you upload the paper. *Do not include them in the body of the paper itself.* In the Cover Letter field, provide your cover letter including acknowledgments (with exceptions noted below), a note stating which data and programs you are willing to make available on request to interested researchers, and the names and complete contact information of all authors. A typical note runs as follows: "For information regarding the data and/or computer programs used for this study, please contact the first author at [e-mail]." When the data used are proprietary, provide the names of agencies or persons who can guide other researchers through the procedures for accessing the data. If you created the data set yourself and wish to exploit it further before making it public, we recommend writing: "Data will be made available to others at reasonable cost from a date six months after the *ILR Review* publication date and for a period of three years thereafter." A statement to this effect will be included in a footnote on the first page of the published article. Do not include acknowledgments to the editor or referees. Also, do not include a disclaimer stating that errors, or the views expressed, are the author's (unless required by the owners of a data source or a funding organization).

Abstract

In the Abstract field, provide an abstract of no more than 150 words. The first sentence generally describes the data, method, and purpose of your paper. Two or three other sentences state the most important findings, conclusions, and, sometimes, implications. Use only terms that will be understood by a general audience (which includes readers who have little background in statistics).

Opening Text

Do not number subheadings, and do not include a subhead titled "Introduction." The introductory section should be brief (approximately three to five paragraphs); free of technical econometric language; and as free as possible of in-text cites and footnotes. Give a brief background and explain how the study differs from previous ones. Do not present an outline of the paper; do not anticipate findings or conclusions.

Body of Paper

Number the pages of your article, so that text passages can easily be referenced. There should be headings, on average, every two to three pages. Avoid very long paragraphs. Use in-text parenthetical Author Date ("scientific") citation style. Whenever a quote or fact or argument you are borrowing appears on specific pages in its source, cite those pages rather than the entire source. Tables and figures should appear at the end of the manuscript.

Conclusion

The conclusion is usually no more than two pages long. Briefly state conclusions, with reference to specific findings as necessary; recapitulate how the findings add to or differ from those of previous studies; and, if appropriate, discuss implications or unanswered questions (but avoid a detailed description of “more research needed”). As in the introductory paragraphs, avoid footnotes and in-text cites.

References and Footnotes

Provide full first names of authors and give both volume and issue number for article entries. Use footnotes sparingly—only for explanatory notes and citations (such as legal citations) that are not easily accommodated by the “scientific” system of citation. See the Manuscript Style Guide for Authors link above for more detailed formatting and style information.

Tables

Use substantive but brief table titles that are accessible to readers without a background in statistics. Include headings for *all* columns (including the far-left, descriptive column), in plain English as much as possible. Use plain English, or sensible abbreviations, in row descriptions as well. Tables should be sized at no larger than 5” x 8” for portrait orientation or 8” x 5” for landscape. Use asterisks to denote statistical significance, as follows: “*Statistically significant at the .10 level; ** at the .05 level; *** at the .01 level.” Take numbers to no more than three decimal places unless finer specification is meaningful. Table footnotes should include sources, notes (can be general for entire table, or can be keyed a, b, c, and so on) explaining cryptic or ambiguous elements, and an explanation of significance levels. We prefer that tables be compiled within Word’s Table feature, and tables must be editable (not copied into the file as a static image).

Figures

Although figures may be copied into the Word file for the initial submission and review process, if the paper is accepted we will probably need figures not embedded within the text. For example, they can be provided from their original software format, such as Excel, .eps, PowerPoint, .jpg, .tif, or .pdf files.

As part of our commitment to ensuring an ethical, transparent, and fair peer review process, Sage is a supporting member of [ORCID, the Open Researcher and Contributor ID](#). ORCID provides a unique and persistent digital identifier that distinguishes researchers from every other researcher, even those who share the same name, and, through integration in key research workflows such as manuscript and grant submission, supports automated linkages between researchers and their professional activities, ensuring that their work is recognized.

The collection of ORCID iDs from corresponding authors is now part of the submission process of this journal. If you already have an ORCID iD you will be asked to associate that to your submission during the online submission process. We also strongly encourage all coauthors to link their ORCID iD to their accounts in our online peer review platforms. It takes seconds to do: click the link when prompted, sign into your ORCID account and our systems are automatically updated. Your ORCID iD will become part of your accepted publication's metadata, making your work attributable to you and only you. Your ORCID iD is published with your article so that fellow researchers reading your work can link to your ORCID profile and from there link to your other publications.

If you do not already have an ORCID iD please follow this [link](#) to create one or visit our [ORCID homepage](#) to learn more.

There are no fees payable to submit or publish in this journal.
