<p>Manuscript Style: Publication Manual of the American Psychological Association</p> <p>Manuscript Length: 21-25 pages</p> <p>Copies Required: Electronic Only</p>	<p>Reader: Academics, Practitioners</p> <p>Frequency of Issue: Bimonthly</p> <p>Sponsor/Publisher: SAGE Publications</p>

MANUSCRIPT TOPICS

Psychological Testing; Research Methods & Statistics

MANUSCRIPT GUIDELINES/COMMENTS

Information for Authors

Applied Psychological Measurement (*APM*) publishes empirical research on the application of psychological measurement to substantive problems in all areas of psychology and related disciplines.

The classes of studies published include reports on (1) the development and application of innovative measurement techniques, (2) methodological developments in the solution of measurement problems, (3) comparisons of different measurement techniques, (4) investigations of the applicability of measurement methodologies, (5) empirical studies on validation and reliability methodologies, and (6) critical reviews of measurement methodology. Validity and reliability studies of psychological measuring instruments are published only if they have a methodological focus.

Methodologically oriented studies in the measurement of ability, aptitude, personality, interests, and social, developmental, and perceptual variables will be considered, as will studies in test development and unidimensional and multidimensional scaling. This journal does not publish papers that are purely statistical in nature, unless they are demonstrably related to applied measurement problems (e.g., problems in the estimation of parameters in measurement models, or problems in the determination of validity or reliability of measurement techniques).

Brief Reports will also be considered for publication. These papers report on exploratory, small-sample, and replication studies, as well as brief technical notes. Brief Reports are limited to two published pages, or about 1,000 manuscript words, including tables, figures, and references (about four typed double-spaced manuscript pages). Brief Reports do not require an abstract, and summaries at the end of the paper should be avoided. Similarly, the literature review should be kept to a minimum.

The **Computer Program Exchange** publishes abstracts of computer programs and subroutines useful in the solution of applied measurement problems or in the instruction of measurement concepts. Only abstracts designed for the exchange of software that would be otherwise unavailable will be published; information about programs developed for commercial distribution should be made available by advertisement. Abstracts should be limited to two typed double-spaced manuscript pages. They should include the following information: name of program or subroutine; a brief description of its purpose and function; description of the programming language; computer(s) on which it is operational and any unusual computer requirements in terms of size of memory, disks, and so forth; nature of documentation available; form in which program is available (e-mail, disk); cost of acquisition; name and mailing address of the program's author; and the author's e-mail address. Acceptable abstracts will be published on a space-available basis. Abstracts that are unacceptable in content or form will be returned to the author. Send abstracts for Computer Program Exchange Editor, Niels G. Waller, Department of Psychology, N-218 Elliott Hall, 75 E. River Road, University of Minnesota, Minneapolis, MN 55455, USA; e-mail: nwaller@umn.edu. Two printed copies of the abstract should be accompanied by an electronic copy in Microsoft Word format. Submissions should also include one copy of the executable software, the program source code, software documentation, and sample input and output files.

Software Notes are brief reports of a researcher's experience with commercially available software programs. They report on unexpected experiences or observations based on use of a program that will help others recognize or avoid potential problems with the program. Software Notes are published on a space-available basis with minimal editing. They should be submitted to the Editor electronically in Microsoft Word format, along with two hard copies. They should be submitted online, via SAGE Publications/APM's SAGETRACK site, at <http://mc.manuscriptcentral.com/apm>.

Computer Software Reviews are published for new or upgraded, commercially available computer packages for personal computers. Windows or Macintosh software for item and test analysis (including differential item functioning), item response theory calibration and applications (including equating and linking), item banking and test construction, item factor analysis, computerized adaptive testing, and other statistical analyses related to measurement are reviewed by invitation. Readers or software authors/publishers may request reviews of software packages by corresponding with the Computer Software Review Editor or by sending software packages for review. Readers interested in being considered as software reviewers should write to Richard M. Luecht, Computer Software Review Editor, Educational Research Methodology, School of Education, The University of North Carolina, Curry 209, P.O. Box 26170, Greensboro, NC 27402-6170, USA.

Book Reviews of important new books are published. Please select "Book Review" as the manuscript type when submitting a book review via Manuscript Central. Reviews should be no more than 1,500 words, including references. Documents should be formatted according to the APA guidelines. However, the first page should include the Title (Edition); Author(s) or Editor(s); City, State; Publisher, Year, Pages, Price; ISBN number, each on a separate line. The review should begin on the second page. The body of the review should include the following components, as relevant to the book in question: 1) A description of the content of the book (What is this book about?); 2) An outline of the book, chapter-by-chapter (What is each chapter of the book about?); 3) A description of any particular strengths or shortcomings of the book as well as a description of unique contributions that the book makes (What is special/disappointing about the book?); 4) A description of the audience and purposes for which the book may be appropriate (Who should consider buying this book?). Instructions for final submission of accepted book reviews will be sent to authors in the final acceptance letter. Although book reviews are published by invitation, readers may suggest books to be considered for review. Readers who wish to be considered as reviewers should write or e-mail the Book Review Editor, Se-Kang Kim, Department of Psychology, Fordham University, 441 E. Fordham Road, Bronx, NY 10458, e-mail: sekim@fordham.edu.

For the Record provides an opportunity for authors of books reviewed in this journal, or authors whose work is cited in our articles, to publish comments on those reviews or citations. For the Record offers authors a mechanism for responding to what they may consider to be misinterpretations, errors, or misrepresentations of their work. Authors' comments should be brief and restricted to correcting (1) errors of fact or (2) errors of interpretation. Comments on Book Reviews should be submitted electronically, preferably in MSWord format, to the Book Review Editor, Se-Kang Kim, sekim@fordham.edu; comments on Software Reviews should be sent to the Software Review Editor, Richard M. Luecht, Educational Research Methodology, The University of North Carolina, Curry 209, P.O. Box 26171, Greensboro, NC 27402-6171; comments on articles should be submitted to the Editor. All submissions should be typed and double-spaced; and hard-copy submissions to Software Reviews should be submitted in duplicate.

Announcements of general interest to readers will be published. Highest priority will be given to announcements of meetings, symposia, workshops, and the like. Other announcements that will be considered include the availability of technical reports or other publications with limited circulation, notices of new publications, or brief items of general interest to applied measurement specialists. Send two printed copies of the announcement and the text of the announcement in Microsoft Word format to the Editor at the address below.

Submission of Manuscripts

APM now uses an online submissions process. The benefits of this system include immediate feedback to authors when a manuscript has been successfully submitted; completion of blind reviews online, with reviewer comments available to authors and the editor; automatic manuscript tracking and routing; and, overall, more efficient manuscript handling throughout the process.

To submit your manuscript, go to <http://mc.manuscriptcentral.com/apm>. If you have an author profile, log in and follow the prompts to create your submission. If you do not already have an author profile, click on “Create A New Account” and follow the prompts to create your author profile; then follow the prompts to submit your manuscript.

Manuscripts should be in English, double-spaced in a 12-point font. All manuscripts will be acknowledged when they are received; manuscripts submitted online will be automatically acknowledged upon successful submission. Authors should retain a copy of their manuscripts regardless of whether the manuscript is submitted online or not. It is understood that papers submitted for publication have not been previously published and will not be published elsewhere, in any language, without the written consent of Sage Publications.

Preparation of Manuscripts

Manuscripts should be as concise as possible, yet sufficiently detailed to permit adequate communication and critical review. Authors should follow the style of the *Publication Manual of the American Psychological Association* (fifth edition, 2001).

Authors should prepare their manuscripts (including equations and tables) in a version of MS Word earlier than 2007. MS Word format is required for online submission. The online submissions system stores author information, abstract, key terms/phrases, etc., separately from the submitted manuscript; please be sure to give each uploaded file the correct file category, using the pull-down menu. Manuscripts must be in English; non-English language submissions will be returned to the authors for translation before reviewers are assigned. **Authors must completely blind the manuscript before submitting it. A title page and/or other text that could identify the authors to reviewers (such as an Acknowledgments paragraph) must be removed from the main document, but may be uploaded separately, using the file category “Supplementary File Not For Review”; this file category keeps those files inaccessible to reviewers.**

The SAGETRACK database contains identifying information for each manuscript and each author, including the manuscript title, contact information for all authors (name, institutional affiliation, e-mail address(es), telephone number(s), complete mailing address of the corresponding author, and fax number, if available). The author should also upload an abstract of the manuscript of no more than 150 words, and should enter five to seven index terms or phrases that will be published following the abstract and will appear in the volume and cumulative indexes. The SAGETRACK system asks authors to enter and/or upload all of the above-mentioned information.

The following sections should be prepared as indicated:

References. Text citations and references should follow the style of the *Publication Manual of the American Psychological Association* (fifth edition, 2001).

Tables. Tables should be numbered consecutively with Arabic numerals. Each table should be fully titled and typed on a separate page. Each table should be fully titled and uploaded separately, as supplementary files. Tables should also be part of the uploaded manuscript. Footnotes to tables should be identified by superscript lowercase letters and placed at the bottom of the table. All tables should be referred to in the text. Tables should be typed single-spaced.

Figures. All figures and figure titles should be entered online as supplementary files, and should also be part of the uploaded manuscript. All figures should be referred to in the text.

Equations. Equations should be typed on separate lines in the text. All equations should be referred to in the text, or be a natural part of the text, including appropriate punctuation. All equations should be numbered consecutively in parentheses on the right-hand side. References to equations in the text should be formatted as “Equation 1” not “(1).”

Acknowledgments. All acknowledgments (e.g., financial support, review by others) will appear at the end of the manuscript, following the references. Authors may enter this information online as a supplementary file.

Reviewers. Nominations of reviewers, including self-nominations, should be sent to Mark L. Davison, Department of Educational Psychology, University of Minnesota. E-mail: apm@umn.edu.
