**JPEN Author Guidelines**

**General Information**
The *Journal of Parenteral and Enteral Nutrition (JPEN)* is the premier scientific journal of clinical nutrition and metabolic support. It publishes original peer-reviewed studies that define the cutting edge of basic and clinical research in the field. It explores the science of optimizing the care of patients receiving enteral or IV therapies. *JPEN* is an official journal of the American Society for Parenteral and Enteral Nutrition (A.S.P.E.N.).

*JPEN* accepts contributions on a wide range of issues within the field of clinical nutrition covering topics such as:
- High quality evidence supporting best clinical practices in human populations
- Translational research investigating novel strategies that optimize nutrition support therapy
- Basic research enhancing understanding of cellular and molecular nutrient utilization, metabolism, and pathophysiology
- Critical reviews of current knowledge in nutrition and metabolism
- Educational and training strategies establishing best learning outcomes and fostering a robust community of nutrition support practitioners
- Innovative techniques, materials, and devices demonstrating improved outcomes
- Case reports/series informing novel hypothesis generation and clinical insight.

**Manuscript Categories**
Manuscripts may be submitted in any of the following categories: Original Communication, Brief Communication, Case Report/Series, Letter to the Editor, Tutorial, Review, Clinical Guidelines*, and Book Review.

*Please note: Submission of Clinical Guidelines is restricted to A.S.P.E.N.’s Clinical Guidelines Editorial Board. To submit suggestions for future topics, please email the Clinical Guidelines Editor in Chief Dr Charlene Compher at compherc@nursing.upenn.edu.*

**Original Communication**
Original Communications are comprehensive, fully documented reports of original research. They should present complete results with a detailed Materials and Methods section. They should also include a structured abstract (200–250 words) and a Clinical Relevancy Statement, which is a brief statement allowing the reader to quickly identify the clinical applicability of the research presented in the article. Please see an example here. Original Communications usually contain between 6,500 and 8,000 words of text. They may also include tables, figures, and other supplemental information.

**Brief Communication**
Brief Communications are preliminary reports of original, significant research results. Communications are typically no longer than 4,500 words, including all literature citations. Formulas, figures, and tables may also be added. Brief communications should include a
structured abstract and a Clinical Relevancy Statement, which is a brief statement allowing the reader to quickly identify the clinical applicability of the research presented in the article. Please see an example here.

**Review**
Reviews are complete, critical evaluations of the current state of knowledge in a particular subject area. In addition to presenting and discussing research accomplishments, reviews also highlight remaining challenges and possible future research developments in a particular field. Although reviews are generally commissioned by the Journal, unsolicited submissions are also welcome. Reviews should consist of a maximum of 20,000 words, including text, footnotes, literature citations, tables, figures, and legends. An unstructured abstract of 200–250 words is required.

**Letter to the Editor**
Letters to the Editor provide substantive comments on papers published in the Journal or on topics of broad interest to the clinical nutrition and metabolic support community. Letters should be submitted no later than six weeks after publication of the paper discussed in the Letter. Letters to the Editor are generally no more than 500 words. All letters accepted for publication are edited, and the edited versions are reviewed by authors for approval prior to publication.

**Tutorial**
Tutorials are aimed at providing background knowledge to an audience unfamiliar with the topic covered in the article. Tutorials foster the cross-fertilization of knowledge among interdisciplin ary teams of professionals involved in nutrition support; they may be used as educational tools for dietitians and clinical nutritionists working in collaboration with physicians and other medical practitioners.

Tutorials usually contain between 6,500 and 8,500 words; they may contain historical or biographical information and supplementary data, including videos. Tutorials should have an unstructured abstract.

Authors of tutorial articles are required to provide:
- a glossary of technical words or concepts specific to the subject matter covered in the tutorial
- a Further Reading list (e.g., books, online courses)
- a short bio of the author (about 200 words) that includes research interests (for single-author tutorials only)
- a minimum of 2 color images to be used for the online version of the article (black and white versions will appear in the print version unless authors choose to pay color printing fee).

**Commentary**
Commentaries are short, narrowly focused articles usually commissioned by the Journal. They provide critical or alternative viewpoints on key issues and generally consist of a discussion of
an article recently published in the Journal. Although commentaries are generally commissioned by the Journal, unsolicited submissions are also welcome.

**Case Report/Case Series**
Case Reports (either a single case or a case series) focus on nutrition management with a detailed description of diagnosis, nutrition intervention, findings, and outcome. They should offer new insight into the diagnosis or treatment of a disease. All case reports will be evaluated based on clinical interest and educational value.

Case Reports generally are a maximum of 2,000 words. They include a concise review of literature, with a number of references generally ranging from 6 to 10. An unstructured abstract is welcome but not required.

**Book Review**
Book Reviews are generally commissioned. Nevertheless, suggestions for books to review are welcome. Additionally, if you wish to review a book, please contact the editorial office at jpen@nutritioncare.org.

**Manuscript Submission**
Manuscripts must be submitted online at [http://mc.manuscriptcentral.com/jpen](http://mc.manuscriptcentral.com/jpen). There is no submission fee. Author instructions and forms are available at this site. Please note that your author account will be the same for JPEN as well as Nutrition in Clinical Practice (NCP), because authors submitting manuscripts for publication in JPEN are submitting their manuscript to the A.S.P.E.N. journals’ office database, accessible to the Editors of both A.S.P.E.N. journals.

Manuscripts are considered with the understanding that they have not been published previously except in abstract form or as preliminary observations and are not under consideration by another publication. Each submission is given unbiased consideration and evaluated without regard to the race, gender, ethnic origin, or citizenship of the author(s). We treat all articles as confidential until they are published in the Journal.

**Author Responsibilities**
**Corresponding Author**
One corresponding author should be designated for each manuscript. This person will be responsible for submitting the Transfer of Copyright form on behalf of all other authors (in cases where no authors are employees of the federal government). This person will also be responsible for all correspondence with the editorial office and will also be responsible for responding to inquiries from readers after the publication of the manuscript. Please be mindful that contact information should include a permanent address so that readers can easily be in touch with the corresponding author after publication as needed.
To select a different corresponding author after the acceptance of the manuscript, a written request from both the new and previous corresponding author must be submitted to the editorial office at jpen@nutritioncare.org.

**Conflict of Interest**
When a paper is submitted to *JPEN*, all authors must disclose any personal or financial conflicts of interest within the online submission system. A conflict of interest may exist when an author (or his or her institution or employer) has financial or personal relationships or affiliations that could influence (or bias) the decisions, work, or manuscript of the author(s). All authors are required to disclose all potential conflicts of interest, including specific financial interests and relationships and affiliations (other than those affiliations listed in the author page of the manuscript) relevant to the subject of their manuscript. Authors should make full disclosures as appropriate.

Authors are expected to provide detailed information about all relevant financial interests and relationships or financial conflicts within the past 5 years and for the foreseeable future. Examples include employment/affiliation, grants or funding source, consultancies, honoraria, speakers' bureaus, stock ownership or options, expert testimony, and royalties. Also included are patents filed, received, pending, or in preparation, particularly those present at the time the research was conducted and through publication, as well as other financial interests that represent potential future financial gain. Authors with questions should contact the editorial office at jpen@nutritioncare.org.

For published manuscripts, each author's disclosure of conflicts of interest and relevant financial interests and affiliations and declarations of no such interests will be published.

**Academic Conduct**

**A.S.P.E.N. Policy on Academic Misconduct.** The Society takes seriously its role in safeguarding the research record and ensuring the reliability of our publications. A.S.P.E.N.’s approach to academic misconduct is primarily preventive, asking authors to provide information about prior submission of their work and to use citations to traceable sources as well as conducting our internal refereeing and single-blind peer review processes. For more information, read the [A.S.P.E.N. Policy on Academic Misconduct](mailto:).  

**Authorship.** Authorship should be provided to all individuals, and only those individuals, who meet the following published criteria from the International Committee of Medical Journal Editors:

1) substantial contributions to conception and design, or acquisition of data, or analysis and interpretation of data;
2) drafting the article or revising it critically for important intellectual content, and;
3) final approval of the version to be published.

**Ethical Board Approval.** All studies that involve human subjects must be approved or deemed exempt by an official institutional review board, ethical board, or equivalent in accordance with
local regulations; this should be noted in the Methods section of the manuscript. Also see the Informed Consent section below.

Animal experiments require full compliance with local, national, ethical, and regulatory principles, and local licensing arrangements.

Plagiarism. *JPEN* takes a firm stance against plagiarism and other forms of academic misconduct. Submitted manuscripts will be subject to plagiarism screening through the use of a plagiarism detection software. Any manuscripts that are found to be plagiarized, in whole or in part (including self plagiarism), will be subject to immediate rejection, and the author’s institution may be contacted for further action. For more information about what constitutes plagiarism, please see the [A.S.P.E.N. Policy on Academic Misconduct](#).

### How to Prepare Your Manuscript

#### Format

Please use double spacing throughout. Standard 10- or 12-point type and spacing are preferred to proportional spacing. Use generic names of drugs, unless the specific trade name of a drug is directly relevant to the discussion; when using the trade name, please provide the name and location of the manufacturer. Limit the use of abbreviations in the title and abstract and cite the term in full at its first use in the text. When reporting experiments on human subjects, indicate that the procedures followed were in accordance with the ethical standards of the responsible institutional committee on human experimentation (see IRB approval requirements). Protect the identities of all patients. When reporting experiments on animals, indicate approval by the institution’s animal care and use committee.

#### Title Page

On the title page, list each author’s full name, licensures, highest academic degrees, and affiliation. If an author’s affiliation has changed since the time the work was done, list the new affiliation as well. Also state the name and affiliation of any statistical reviewer consulted.

#### Abstract

Include an abstract of no more than 250 words. Abstracts for Original Communications should be structured, consisting of the following sections: (1) *Background*, state the problem or purpose of the study; (2) *Materials and Methods*, briefly describe the study design and variables; (3) *Results*, describe the main findings; and (4) *Conclusion*, emphasize new or important aspects of the study or observations. Abstracts for review articles do not need to be explicitly structured, but should address the relevance of the subject matter, methods of the review, major findings, and conclusions.

#### References

Please number references in the order they are mentioned in the text; do not alphabetize. In text, tables, and legends, identify references with superscript Arabic numerals. In listing references,
follow AMA style, abbreviating names of journals according to Index Medicus. Please list all authors up to 6 names; if there are more than 6 authors, use “et al.” following the third author’s name.

Examples:

**Tables**

Double space on separate sheets. Title all tables and number them in order of their citation in text. If a table must be continued, repeat the title on a second sheet, followed by “(cont.).”

**Figures**

Submit figures as .jpg, .tiff, .pdf, .ppt, or .xls format in high resolution (file size 500K to 1M with a final print resolution of 300 dpi). Please number figures in order of their citation in text. Note that there will be restrictions and a charge to the authors for printing color figures. Include a figure legend in Word format with a brief caption (40 words maximum) for each figure. Indicate magnification and stain used for photomicrographs.

**Acknowledgments and Permissions**

Acknowledge all material, including figures, tables, and large blocks of text that are reproduced or adapted from other sources, whether published or unpublished, and submit the original copyright owner’s written permission to reproduce or adapt the material in *JPEN*.

**English Language**

Appropriate use of the English language is a requirement for publication in the *Journal*. Authors who have difficulty writing in English may seek assistance with grammar and style to improve the clarity of their manuscript. Many companies provide substantive editing via the Web, including ScienceDocs, American Journal Experts, Bioscience Editing Solutions, BioScience Writers, Boston BioEdit, Editage, International Science Editing, SPI Professional Editing, and Write Science Right. Please note that neither A.S.P.E.N. nor *JPEN* takes responsibility for or endorses these services. Their use does not guarantee acceptance of a manuscript for publication.

**Informed Consent**

If the manuscript reports the results of an experimental investigation of human subjects, state formally that an appropriate IRB approved the project and/or that informed consent was obtained from subjects after the nature of the procedure(s) had been explained. Include a signed statement of consent from the patient (or, if the patient is a minor, from one or both parents or the legal guardian) with all identifiable photographs. Consent forms must contain a statement that photographs and information about a case may be published separately or together and that the patient’s name will not be disclosed.
**Editing**
Accepted manuscripts will be copy edited according to *JPEN* style; authors may consult the American Medical Association Manual of Style 10th edition (2007) for general style guidelines. Galley proofs are sent to the corresponding author for approval. Authors are responsible for all statements made in their work, including changes made by the copy editor and authorized by the corresponding author.

**Transfer of Copyright**
All accepted manuscripts become the property of A.S.P.E.N. and may not be published elsewhere without written permission from A.S.P.E.N. Copyright will be transferred to A.S.P.E.N. on behalf of all coauthors by the submitting author through SageTrack. Copyright will revert to authors for any manuscripts that are rejected.

**Submission Checklist**

- Current and valid email address for each author listed on the manuscript.
- Cover letter with postal and email addresses, telephone, and fax numbers for one corresponding author.
- Title page with keywords and short title.
- Structured abstract with the following headings: Background, Material and Methods, Results, and Conclusion (for certain manuscript types).
- References in proper *JPEN* format and in numerical order, with each cited in the text.
- Consent forms for patient photographs.
- Permission grants for previously published materials.
