Imagine a society of saints, a perfect cloister of exemplary individuals. Crimes, properly so-called, will there be unknown; but faults which appear venial to the layman will create there the same scandal that the ordinary offense does in ordinary consciousness.

—Émile Durkheim (1895/1950, pp. 68–69)

Crime is a sociopolitical artifact, not a natural phenomenon. … We can have as much or as little crime as we please, depending on what we choose to count as criminal.

—Herbert Packer (1968, p. 364)

**Criminology**

Remorseless suicidal terrorists hijack four airplanes and, with all passengers aboard, are successful in crashing two of these into the World Trade Center and one into the Pentagon, murdering nearly 3,000 people in the worst terrorist attack in history. A man shot and killed 58 concertgoers from the 32nd floor of the Mandalay Bay Resort and Casino in the worst mass murder in U.S. history. Major corporations and their accounting firms conspire and cause a major stock market plunge, losing stockholders billions of dollars.

What all of these events have in common is that they refer to various forms of criminal behavior; as we have just begun the 21st century, we can only guess what new, unforeseen horrors await us. The field that addresses this issue of crime and criminal behavior and attempts to define, explain, and predict it is criminology.

Criminology is generally defined as the science or discipline that studies crime and criminal behavior. Specifically, the field of criminology concentrates on forms of criminal behavior, the causes of crime, the definition of criminality, and the societal reaction to criminal activity; related areas of inquiry may include juvenile delinquency and victimology (the study of victims). Although there is considerable overlap between criminology and criminal justice, criminology shows a greater interest in the causal explanations of crime, whereas criminal justice is more occupied with practical, applied concerns, such as technical aspects of policing and corrections. In reality, the fields are highly complementary and interrelated, as indicated by overlapping membership in the two professional organizations representative of the fields: the American Society of Criminology and the Academy of Criminal Justice Sciences.

If you tell your friends that you are taking a course in criminology, many will assume that you are a budding Sherlock Holmes, on your way to becoming a master detective trained in investigating crime scenes. That describes the field of criminalistics (the scientific evaluation of physical evidence), which is sometimes confused in the media and public mind with criminology. Criminology is more concerned with analyzing the phenomena of crime and criminality, in performing scientifically accurate studies, and in developing sound theoretical explanations of crime and criminal behavior. It is hoped that such criminological knowledge and scientific research can inform and direct public policies to solve some crime problems.

---

**LEARNING OBJECTIVES**

1.1 Define criminology and discuss the emergence of criminology as a discipline.

1.2 Identify Sumner’s three types of norms.

1.3 Discuss how definitions of crime and laws change in relation to social change.

1.4 Explain the influence of criminal law on crime definitions.

1.5 Describe the economic effects of crime.

---

Criminology the scientific study of crime and criminal behavior.

Crime violations of criminal law.
major concentration in this text is on the central areas of criminal behavior, research methodology, and criminological theory. Of particular interest is the exploration of crime typologies, the attempt to classify various criminal activity and criminals by type.

Fads and Fashions in Crime

A variety of crimes were of major concern in the past but appear in modern societies only in old movies on the late show. Train robbery, piracy, stagecoach robbery, cattle rustling, gunfights such as that at the O.K. Corral, and grave robbery have some modern remnants but for the most part have disappeared. Some of these practices have reappeared in different forms. In the 1970s, South Vietnamese “boat people” attempting to escape from their homeland were robbed, raped, and murdered by Thai pirates. In late September 2017, a passenger ship was attacked by pirates on Nigerian waters, which left two people dead. Brink’s trucks have replaced stagecoaches, and semitrailer trucks full of prepared beef are hijacked instead of herds of live cattle. Post–Civil War gangs of Wild West robbers such as those of Doc Holliday, Jesse James, the Daltons, Black Bart, the Younger brothers, and Butch Cassidy disappeared with the settlement of the frontier only to reappear on wheels during the Depression of the 1930s in the persons of such infamous characters as John Dillinger, “Pretty Boy” Floyd, the Barrows, Bonnie Parker, and the Ma Barker gang. Mobile, organized gangs of bank robbers have largely faded into a quaint, unsavory history; they are now replaced by cybercriminals who can commit global electronic robbery.

Skyjacking, a major problem in the 1960s, was virtually eliminated as a result of better security measures, only to reappear in the United States in the early 1980s as an attempt by Cuban refugees to escape their homeland or by suicidal terrorists to wreak mass destruction. The skyjacking of four jumbo jets with the intention of using them as weapons of international terrorism represented the horrific events of 9/11. Kidnapping, a major concern in the United States in the 1930s (as illustrated by the famous Lindbergh case), is less of a concern today despite the rash of child kidnappings by noncustodial parents. On the other hand, since the 1970s, kidnapping has become a major crime in Italy, as best illustrated by the highly publicized kidnapping of billionaire J. Paul Getty’s grandson; the kidnappers mailed one of the young man’s ears to a daily newspaper to impress upon the family the seriousness of their intentions. The story of the kidnapping was recently made into a movie, All the Money in the World, which was released in 2017. In 1995 in Colombia, a kidnapping was reported every 6 hours. This was believed to have been precipitated by huge income disparities and inefficient police. The United States, by contrast, has experienced fewer than 12 kidnappings for ransom every year (Brooke, 1995). Slavery continues to be practiced in the form of human trafficking. Nostalgic views of the past tend to romanticize bygone violence or suppress its memory. Most apt to be forgotten are conditions of the past that more than match any chronicle of horrors of the present.

Crime File 1.1 examines the FBI’s “Ten Most Wanted Fugitives” list and includes photographs of the most wanted criminals.

The Emergence of Criminology

French sociologist Auguste Comte (1798–1857) viewed the progression of knowledge as consisting of three stages, from the predominantly theological explanations to metaphysical (philosophical) approaches to scientific explanations (Comte, 1851/1877). Prior to the emergence of modern criminal law in the 18th century, religion was the primary basis of social control beyond kinship organization. Theological explanations used supernatural or otherworldly bases for understanding reality. Recall, for instance, the papal condemnation of Galileo for heretically
Crime File 1.1
THE FBI’S 10 MOST WANTED FUGITIVES

In 1950, a news reporter asked the FBI for the 10 worst “tough guys” that they were hunting. The resulting publicity was so great that the list became an official FBI program. It satisfied the public’s hunger for details about notorious criminals and served as a means of exposing fugitives and encouraging citizen participation.

The FBI claims that since the program’s initiation, 161 of the “Ten Most Wanted Fugitives” have been apprehended as a result of citizen cooperation. Perhaps the most memorable case was the arrest of bank robber Willie Sutton when a clothing salesman recognized him on the New York City subway. After the citizen’s story was run in the New York Times, mobster Albert Anastasia had the salesman killed because, as he stated, “I hate squealers.”

The list has reflected very well the social climate of various time periods in the United States. The 1950s list consisted primarily of bank robbers, burglars, and car thieves, while the 1960s version featured revolutionaries and radicals. The 1970s list was dominated by organized criminals and terrorists, and although this emphasis continues, serial murderers and drug-related offenders abound in later lists. A recent “Ten Most Wanted Fugitives” list features the following:

- **Rafael Caro-Quintero**—wanted for his role in the murder of a DEA special agent.
- **Greg Alyn Carlson**—alleged serial sexual predator.
- **Lamont Stephenson**—wanted for allegedly murdering his fiancée and her dog.
- **Robert William Fisher**—wanted for allegedly killing his wife and two young children and then blowing up the house.
- **Alejandro Castillo**—wanted for allegedly murdering one of his coworkers.
- **Alexis Flores**—wanted for unlawful flight to avoid prosecution and the alleged kidnapping and murder of a 5-year-old girl.
- **Bhadreshkumar Chetanbhai Patel**—wanted for allegedly killing his wife while they were both at work at a donut shop.

For Further Thought

1. Visit the FBI website and look up “Headline Archive: Top Ten Quiz on the Top Ten Program” and see how many questions you can answer correctly.

questioning biblical descriptions of the earth and celestial objects. In the metaphysical stage, philosophy sought secular (worldly) events to provide understanding through a new spirit of inquiry—rationality and logical argument. The two features of the scientific stage combined this rational spirit of investigation with the scientific method, emphasizing empiricism or experimentation. The scientific orientation emphasized measurement, observation, proof, replication (repetition of observation), and verification (analyzing the validity of observations).

Systematic application of the scientific method enabled humankind to unlock many of the mysteries of the ages. At first, breakthroughs in knowledge took place in the physical sciences; more recently, changes have also begun to occur in the social sciences, such as sociology and criminology. Because the scientific method provided major understanding and the ability to predict and control physical reality, the hope is that these same methods are applicable to and will prove useful in the social sciences. Although many view criminology as a science, others, such as Sutherland and Cressey (1974), view it as an art similar to medicine, a field based on many sciences and disciplines.

Criminology as a field of inquiry had its beginnings in Europe in the late 1700s in the writings of various philosophers, physicians, physical scientists, sociologists, and social scientists. Much of the early theory was heavily couched in biological frameworks that have largely been abandoned by modern American criminology until recently. Criminology emerged along with 18th-century criminal law. In fact, it was the early writings of Cesare Beccaria (1738–1794), especially his famous essay *On Crimes and Punishments* (1963), which was first published in 1764, that led to the reform of criminal law in Western Europe.

Despite its European roots, most of the major developments in modern criminology took place in the United States. Criminology was closely linked with the development of sociology, gaining its place on the U.S. academic scene between 1920 and 1940. Criminology had been largely a subdiscipline of sociology; even though criminology is interdisciplinary in focus, sociologists have devoted the most attention to the issue of criminality. Since the 1960s, criminology has emerged as a discipline in its own right. The earliest U.S. textbooks in the field were by Maurice Parmelee, John Gillin, Philip Parsons, and Fred Hayes, but it was the text and later writings of Edwin H. Sutherland, the acknowledged “dean of criminology,” that received the most deserved recognition.

**LEARNING CHECK 1.1**

Determine if the following statements are true or false. Answers can be found on page 474.

1. Criminology is primarily concerned with investigating crime scenes.
2. Criminology as a discipline had its beginnings in Europe in the late 1700s.

**Crime and Deviance**

*Deviance* or *deviant behavior* may refer to a broad range of activities that the majority in society may view as eccentric, dangerous, annoying, bizarre, outlandish, gross, abhorrent, and the like. It refers to behavior that is outside the range of normal societal toleration.

Definitions of deviance are relative to the time, the place, and the person(s) making the evaluation, and some acts are more universally defined than others. For instance, in the mid-19th century in the United States, bathing in a tub was considered immoral as well as unhealthy.

All societies have *cultural values*—practices and beliefs that are prized by or believed to be of benefit to the group. For instance, despite cultural relativity in defining deviance, anthropologists have identified a number of cultural universals—practices or customs that in general form exist in all known cultures. All cultures that have been studied look dimly on indiscriminate lying, cheating, stealing, and killing. Societies protect their values by creating norms, which are basically rules or prescribed modes of conduct.
Sumner’s Types of Norms

Early American sociologist William Graham Sumner, in his classic work *Folkways* (1906), identifies three types of norms: folkways, mores, and laws. These norms reflect the values of a given culture; some norms are regarded by its members as more important than others. Folkways are the least serious norms and refer to usages, traditions, customs, or niceties that are preferred but are not subject to serious sanctions: manners, etiquette, and dress styles, for example. The character Reb Tevye in the musical *Fiddler on the Roof*, when learning that his daughter has rejected the marriage mate chosen by the matchmaker, wails, “Tradition—without our traditions, our lives would be as shaky as . . . a fiddler on the roof.” Recognizing changing times or folkways, however, he ultimately accepts his daughter’s decision to choose her own mate. Mores refer to more serious customs that involve moral judgments as well as sanctions (rewards or punishments). The mores cover prohibitions against behaviors that are felt to be seriously threatening to a group’s way of life. Our previous examples of lying, cheating, stealing, and killing are most certainly included in the mores. Both folkways and mores are examples of informal modes of social control and are characteristic of small, homogeneous cultures that feature simple technology and widespread consensus.

Laws represent formal modes of control, codified rules of behavior. If one accepts the consensus model of law (to be discussed shortly), laws represent an institutionalization or crystallization of the mores.

Mala in Se and Mala Prohibita

We have already identified deviant acts as those that violate group expectations and crime as any act that violates criminal law. Crime and its definition are social products. Society (human groups) decides what is a crime and what is not.

Criminologists make the distinction between acts *mala prohibita* and acts *mala in se*. Acts that are defined as *mala prohibita* refer to those that are bad because they have been prohibited. That is, such acts are not viewed as bad in themselves but are violations because the law defines them as such. Traffic violations, gambling, and infractions of various municipal ordinances might serve as examples. Such laws are viewed as assisting human groups in making life more predictable and orderly, but disobedience carries little stigma other than (usually) fines. The criminalization of such acts might be viewed as institutionalization of folkways. On the other hand, acts *mala in se* are acts that are bad in themselves, forbidden behaviors for which there is widespread consensus on the mores for prohibition. The universality of laws against murder, rape, assault, and the like, irrespective of political or economic systems, bears witness to the lack of societal conflict in institutionalizing such laws. One can note that not all deviant acts are criminal, nor are all criminal acts necessarily deviant, assuming that laws against many acts *mala prohibita* are commonly violated.

Definitions of criminal activity may exhibit both undercriminalization and overcriminalization. Undercriminalization refers to the fact that the criminal law fails to prohibit acts that many feel are *mala in se*. Elements of corporate violence, racism, structured inequality, and systematic wrongdoing by political officials are examples. Overcriminalization involves the overextension of criminal law to cover acts that are inappropriately or not responsibly enforced by such measures. Examples are the legislation of morality and attempts to regulate personal conduct that does not involve a clear victim (drug abuse, sexual conduct, and the like).

Social Change and the Emergence of Law

Western societies have undergone a long-term evolutionary development from sacred or Gemeinschaft societies to secular or Gesellschaft societies (H. Becker, 1950; Toennies, 1957). Gemeinschaft societies are simple, communal, relatively homogeneous societies that lack an extensive division of labor and are also characterized by normative consensus.

Copyright ©2020 by SAGE Publications, Inc. This work may not be reproduced or distributed in any form or by any means without express written permission of the publisher.
Social control is ensured by the family, extended kinship groups, and the community through informal modes of control: the folkways and mores. Such societies lack and do not need formally codified laws because sacred tradition, the lack of change, and cultural similarity and isolation ensure a degree of understanding and control. Gesellschaft societies are complex, associational, more individualistic, and heterogeneous (pluralistic). They are characterized by secularism, an extensive division of labor, and (in free societies) a variety of moral views and political pressure groups. Social control is attempted by formal means—codified laws administered by bureaucratic agencies of the state. Complex societies must rely more and more on such formal controls. As the mores or informal modes of control become weaker, the need for laws becomes greater. For example, as the family as an agent of social control becomes weaker, much of its responsibility is passed on to the state.

Sumner (1906) suggested a general maxim: If laws do not have the support of, or are not in agreement with, the mores of a particular culture, they will be ineffective. The introduction of changes or new laws in society can be explored using Merton’s (1961) concepts of manifest and latent functions. The classic example is what has been described as “the noble experiment,” the Prohibition era in the United States. Manifest functions are intended, planned, or anticipated consequences of introduced changes or of existing social arrangements. In perhaps the last gasp of rural Protestant religious power in the United States, one group managed to pressure Congress into passing the Eighteenth Amendment prohibiting alcohol in 1919. Alcohol abuse was (and still is) a major problem, and the well-intended goal was for it to be stamped out by totally forbidding alcohol consumption by law. Latent functions entail unintended or unanticipated consequences, ones that may have either positive or negative outcomes. The latent functions of Prohibition included increased corruption, disobedience, and public disrespect for the law. By eliminating legitimate suppliers of a commodity in high public demand, the state in effect created a monopoly for illegitimate entrepreneurs. It was Prohibition that converted small, localized gangs into large, powerful, and wealthy regional and even national organized criminal syndicates.

Laws are by no means the most efficient means of social control; the passage of more and more laws may indicate that social solidarity and informal modes of control in the society are weakening. The police and the criminal justice system become the agents or agencies of last resort. Many people view crime as an evil intrusion into an otherwise healthy society, whereas increased crime levels may be latent functions of increased freedom, affluence, competition, and other desirable manifest functions in society. Sociologist Émile Durkheim (1950) suggested that crime may be a normality, a positive product, a functional necessity in a healthy society. As reflected in the quotation with which we began this chapter, Durkheim’s theory of the functional necessity of crime proposes that wrongdoing or crime serves to force societal members to react, condemn, and thus establish the borders of society and reconfirm its values. It is this organized resentment that upholds social solidarity.

The phrase “crime of the century” seems to be perennially used to refer to the latest dramatic crime. Crime File 1.2 explores crimes to which this label was attached over this past century.
Chapter 1: Introduction to Criminology

Consensus Versus Conflict Versus Interactionist Model of Law

The consensus model of the origin of criminal law envisions it as arising from agreement among the members of a society as to what constitutes wrongdoing. Reflecting the social contract theory of Locke, Hobbes, and Rousseau, criminal law is viewed, as in our previous discussion of Sumner, as a “crystallization of the mores,” reflecting social values that are commonly held within the society. The conflict model, on the other hand, sees the criminal law as originating in the conflict of interests of different groups. In this view, the definition of crime is assumed to reflect the wishes of the most powerful interest groups, who gain the assistance of the state in opposing rival groups. The criminal law, then, is used primarily to control the behavior of the “defective, dependent, and delinquent,” the dangerous classes (Skolnick & Currie, 1988, p. 2); the crimes of the wealthy are very often not even covered. The consensus model views criminal law as a mechanism of social control, and the conflict approach sees the law as a means of preserving the status quo on behalf of the powerful.

A third model of law is the interactionist model, which takes its name from the symbolic interactionist school of criminology. This school of thought views humans as responding to abstract meanings and symbols as well as to concrete meanings. According to George Herbert Mead (1934), even the mind and self-consciousness are social creations. Reflected in labeling theory (see Chapter 8), criminality is viewed as a label or stigma attached by a societal reaction that is subject to shifting standards. Laws are viewed as reflecting moral entrepreneurship on the part of labelers.

Crime and Criminal Law

A purist legal view of crime would define it as violation of criminal law. No matter how morally outrageous or unacceptable an act, it is not a crime unless defined as such by criminal law. Vernon Fox (1985) indicates, “Crime is a sociopolitical event rather than a clinical condition. . . . It is not a clinical or medical condition which can be diagnosed and specifically treated” (p. 28). In this view, which is technically correct, unless an act is specifically prohibited by criminal law, it is not a crime. There are four characteristics of criminal law:

1. It is assumed by political authority. The state assumes the role of plaintiff, or the party bringing charges. Murder, for example, is no longer just an offense against a person but is also a crime against the state. In fact, the state prohibits individual revenge in such matters; perpetrators must pay their debt to society, not to the individual wronged.

2. It must be specific, defining both the offense and the prescribed punishment.

3. The law is uniformly applied. That is, equal punishment and fairness for all, irrespective of social position, are intended.

4. The law contains penal sanctions enforced by punishments administered by the state (Sutherland & Cressey, 1974, pp. 4–7).

Criminal law has very specific criteria: “Crime is an intentional act or omission in violation of criminal law (statutory and case law), committed without defense or justification, and sanctioned
Crime File 1.2
CRIMES OF THE 20TH CENTURY

Every year, it seems some particularly notorious or atrocious crime occurs that is described by the media as “the crime of the century.” The 21st century is still too young to determine what might or might not be the crime of the century, but now that the 20th century is over, we might take stock of some that have been candidates. APBnews.com, an Internet service specializing in crime news, chose the “Ten Crimes of the Century” based on input from its editors, historians, criminal justice experts, and users who voted in its poll, as well as those answering its telephone survey. The Ten Crimes of the Century from the APBnews.com survey, listed chronologically, were as follows:

- President McKinley’s assassination
- The St. Valentine’s Day Massacre
- The Lindbergh baby kidnapping
- The Rosenbergs’ spy trial
- President Kennedy’s assassination
- Martin Luther King Jr.’s assassination
- The Watergate break-in
- The Ted Bundy serial killings
- The O. J. Simpson trial
- The Oklahoma City bombing

The assassination of President William McKinley in 1901 by Leon Czolgosz was a political crime in support of a hoped-for class revolt, while the St. Valentine’s Day Massacre by the Capone Mob in the 1920s illustrated the ascendancy of ruthless organized crime groups during Prohibition. The tragic kidnapping and murder of the Lindbergh baby led to legislation designating kidnapping as a federal offense. The trial and subsequent execution of Julius and Ethel Rosenberg, native-born Americans who betrayed their country by giving America’s atomic secrets to the Soviets, solidified the Cold War. The assassinations of President John F. Kennedy in 1963 and 5 years later of civil rights leader Dr. Martin Luther King Jr. gave rise to numerous conspiracy theories that secret, sinister forces were responsible.

The Watergate affair in the 1970s would lead to the first forced resignation of an elected president in disgrace in American history, and it remains the benchmark against which all political scandals are compared. Ted Bundy, the serial killer, represents just one of a number of bizarre multiple killers who seemed to proliferate in post–World War II America. The O. J. Simpson murder trial, in which a former National Football League star was found not guilty of murdering his ex-wife and her friend, despite considerable evidence to the contrary, exemplifies the numbers of celebrity cases that have attracted public attention over the years. Finally, the Oklahoma City terrorist bombing (and the 1993 World Trade Center bombing, which is not listed) demonstrated the growing vulnerability to terrorism in modern society. The 1995 Oklahoma City bombing represented the worst terrorist attack, in terms of casualties, on American soil up to that time. It also punctuated for a complacent America the fact that “it can happen here.”

In its “Crime Stories of the Century,” U.S. News and World Report included the following:

- Murder of Stanford White
- Execution of IWW leader Joe Hill
- St. Valentine’s Day Massacre
- Lindbergh kidnapping
- Rosenberg spy case
- Lynching of Emmett Till

Photo 1.3

Chapter 1: Introduction to Criminology

by the state as a felony or misdemeanor” (Tappan, 1960, p. 10). Felonies generally refer to offenses punishable by a year or more in a state or federal prison, whereas misdemeanors are less serious offenses punished by less than a year in jail. Some specific criteria that must be met in the U.S. criminal law in order for an act to be considered a crime include the following:

1. The act is prohibited by law and contains legally prescribed punishments. Nullum crimen sine lege (no crime without law) is the Latin expression, which can be expanded to include the notion that ex post facto (after-the-fact) laws are inappropriate. The act must be forbidden by law in advance of the act.

2. A criminal act, actus reus (the act itself, or the physical element), must have taken place.

3. Social harm of a conscious, voluntary nature is required. There must be injury to the state or to people.

4. The act is performed intentionally (although cases of negligence and omission may be exceptions). Mens rea (criminal intent or “guilty mind”) is important in establishing guilt. A person who may have committed a criminal act (e.g., John Hinckley, who shot former president Ronald Reagan) may be found not guilty under certain conditions, such as insanity or a history of mental disturbance.

5. The voluntary misconduct must be causally related to the harm. It must be shown that the decision or act directly or indirectly caused harm.

Crimes were originally considered to be private matters: The offended party had to seek private compensation or revenge. Later, only offenses committed against the king and, still later, the king’s subjects were considered crimes. When compensation developed, fines were levied on behalf of the king (the state), thus making the state the wronged party. In addition to being defined by legislative

For Further Thought

1. What do you think was the “Crime of the Twentieth Century”? Visit the web and see if you can find other nominees for a “Top Ten Crimes of the Century” list.

2. Visit www.fbi.gov and find an interesting investigation that they have posted on their site.

statute (statutory law), criminality may also be interpreted by means of case law (common law). In contrast to laws enacted by legislatures, common law is based on judicial decision, with its roots in precedent, or previous decisions. In addition, administrative law, as enforced by federal regulatory agencies, may carry criminal penalties for offenders. Thus, criminal law provisions may be contained in statutory law, common law, and administrative law. Criminology in Context 1.1 describes some typical legal definitions of crime in the United States.

Who Defines Crime? Criminological Definitions

Because crime was previously defined as any violation of criminal law, should criminologists restrict their inquiry solely to acts so defined? Should the subject matter of criminology be decided by lawyers and politicians? This would relegate the field of criminology to a position as status quo handmaiden of political systems. Hitler’s genocide or Stalin’s purges were accepted conduct within their political ideological systems. Criminologists must study the deviants—the criminals—as well as the social structural contexts that define them. Skolnick and Currie (1988), in examining the analysis of social problems, state,

In spite of its claim to political neutrality, the social science of the 1960s typically focused on the symptoms of social ills, rather than their sources: criminals, rather than the laws; the mentally ill, rather than the quality of life; the culture of the poor, rather than the decisions of the rich; the “pathology” of the ghetto, rather than problems of the economy. (p. 11)

A sociological view of crime does not restrict its concept of criminality to those convicted of crime in a legal sense. Were we to restrict analysis of crime solely to the legal definition in most countries, we would discuss primarily “crime in the streets” and ignore “crime in the suites.” We would study the poor, dumb, slow criminal and conclude that low IQs and inferior genetics cause crime; we would ignore the fast, smart, slick violator and the possibility that maybe Ivy League educations and working on Wall Street or for the defense industry also cause crime. Hyperbole is useful at times for effect, and obviously we must not loosely throw around the label criminal, but neither should we ignore dangerous acts that do great harm, simply because the criminal justice system chooses to ignore them.

LEARNING CHECK 1.3

Answer the following questions to check your learning thus far. Answers can be found on page 474.

1. What is the difference between a felony and a misdemeanor?

2. True or False? The conflict model of law views criminal law as emerging from agreement among the members of a society as to what is considered wrong.

3. Which of the following is NOT a characteristic of criminal law?
   a. The victim brings criminal charges.
   b. It is uniformly applied.
   c. It outlines sanctions that will be administered by the state.

The Crime Problem

Radzinowicz and King (1977), in commenting on the relentless international upsurge in crime in the latter decades of the 20th century, indicate,

No national characteristics, no political regime, no system of law, police punishment, treatment, or even terror, has rendered a country exempt from crime. . . . What is
Crime File 1.3
THE JONBENET RAMSEY MURDER

Born in 1990, JonBenet Ramsey participated in many child beauty pageants, winning five of them. On December 26, 1996, Patsy Ramsey, her mother, awoke to find a ransom note that demanded $118,000 for JonBenet’s safe return. The amount demanded was the exact amount of JonBenet’s father, John’s, bonus. Later that day, JonBenet’s body was found in the basement of their Boulder, Colorado, home by John and a friend. Her body was not found earlier, even though law enforcement and others had been in and out of the house all day. JonBenet was found with a garrote around her neck and rope around her wrists. The garrote had a broken paintbrush at the end, which seemed to be from Patsy Ramsey’s (her mother) art set. JonBenet also had a skull injury. Several curiosities in the case emerged. Police identified that the ransom note had been written on a notepad that was kept by the Ramsey’s telephone; it took months for her parents to be formally interviewed by the police; why was a ransom note left for a murder? DNA found on JonBenet’s underpants did not match anyone in the family or anyone near the scene of her body. A grand jury was convened in 1998—they heard testimony for 13 months and eventually voted to indict John and Patsy Ramsey for the murder of JonBenet. Despite this indictment, the district attorney declined to charge her parents. As you might imagine, this case received an enormous amount of media attention, and law enforcement continued to investigate her death for years. In 2006, two major developments occurred. John Mark Karr, an American teacher living in Thailand, confessed to killing JonBenet. But because his DNA did not match the specimen originally collected from her underpants, he was not charged. In addition, her clothing was eventually tested and DNA found on the waistband of her long johns matched the DNA found on her underpants. This finding led the district attorney at the time to issue a formal apology to John and Patsy Ramsey. Her case has never been solved. At least two television specials aired in 2017 about her killing, reviving interest in the case.

For Further Thought

1. What other curiosities can you discover regarding the JonBenet case?

indisputable is that new and much higher levels of crime become established as a reflex of affluence. (pp. 3–5)

Despite rival explanations such as problems with statistics, there has been an obvious increase in crime internationally since World War II.

The Cost of Crime

It is difficult, if not impossible, to measure the economic costs of crime. Estimates of the actual financial operation take us into the “megabucks” range where notions such as “give or take a few billion dollars” stagger the imagination and numb us to the reality of the amounts we are really talking about.

In 2014 in Ferguson, Missouri, riots broke out after police officer Darren Wilson shot and killed Michael Brown and again after a St. Louis county grand jury decided to not indict Wilson. The police as well as the National Guard responded to the riots. Although it is difficult to know the true cost of the riots, it is estimated that it cost taxpayers at least $5.7 million. The Missouri State Highway Patrol incurred costs of $1.1 million when pay, lodging, meals, and equipment are included. Costs to the county are estimated at $4.2 million, which include property damage.

Photo 1.4
On August 8, 2012, mourners gathered in Lafayette Square, near the White House in Washington, DC, to join in a candlelight vigil commemorating the victims of the Sikh Temple of Wisconsin shooting that occurred on August 5, 2012, as well as other victims of hate violence.
police overtime, and food and supplies for first responders. Although far less dramatic, losses at
the nation’s savings and loan companies in the 1980s and early 1990s are estimated to have cost
the American taxpayer $500 billion, or the equivalent of 625 Los Angeles riots.

The National Center for Victims of Crime (2011) gives the following estimates for the cost of
crime in the United States: for 2008 (latest available at the time), $1.19 billion for violent crime and

Criminology in Context 1.1

WHAT IS CRIME?

Crimes are defined by law.

In this report, we define crime as all behaviors and acts
for which a society provides formally sanctioned punish-
ment. In the United States, what is criminal is specified in
the written law, primarily state statutes. What is included
in the definition of crime varies among federal, state, and
local jurisdictions.

Criminologists devote a great deal of attention to defining
crime in both general and specific terms. This defini-
tional process is the first step toward the goal of obtaining
accurate crime statistics.

To provide additional perspectives on crime, it is some-
times viewed in ways other than those suggested by the
standard legal definitions. Such alternatives define crime
in terms of the type of victim (child abuse), the type of
offender (white-collar crime), the object of the crime
(property crime), or the method of criminal activity (orga-
nized crime). Such definitions usually cover one or more
of the standard legal definitions. For example, organized
crime may include fraud, extortion, assault, or homicide.

What is considered criminal by society changes over time.

Some types of events, such as murder, robbery, and bur-
glary, have been defined as crimes for centuries. Such
crimes are part of the common law definition of crime.
Other types of conduct traditionally have not been
viewed as crimes. As social values and mores change,
society has codified some conduct as criminal, while
decriminalizing other conduct. The recent movement
toward increased “criminalization” of drunk driving is an
example of such change.

New technology also results in new types of conduct
not anticipated by the law. Changes in the law may be
needed to define and sanction these types of conduct.
For example, the introduction of computers has added
to the criminal codes in many states so that acts such
as the destruction of programs or data could be defined
as crimes.

How do violent crimes differ from property crimes?

The outcome of a criminal event determines whether it is
a property crime or a violent crime. Violent crime refers
to events such as homicide, rape, and assault that may
result in injury to a person. Robbery is also considered
a violent crime because it involves the use or threat of
force against a person.

Property crimes are unlawful acts with the intent of gain-
ing property not involving the use or threat of force
against an individual. Larceny and motor vehicle theft are
examples of property crimes.

In the National Crime Survey (NCS), a distinction is also
made between crimes against persons (violent crimes and
personal larceny) and crimes against households (prop-
erty crimes, including household larceny).

How do felonies differ from misdemeanors?

Criminal offenses are also classified according to how
they are handled by the criminal justice system. Most
jurisdictions recognize two classes of offenses: felonies
and misdemeanors.

Felonies are not distinguished from misdemeanors in the
same way in all jurisdictions, but most states define felo-
nies as offenses punishable by a year or more in a state
prison. The most serious crimes are never misdemeanors,
and the most minor offenses are never felonies.

For Further Thought

some of the data they present. What perspective on the
criminal law have you gained by visiting this site?

Sources: Bureau of Justice Statistics, BJS Dictionary of Criminal Justice Data Terminology, 2nd ed. (Washington, DC: Government
$16.2 billion for property crime; for 2010, $456 million for robbery, $6.1 billion for larceny theft, and $4.6 billion for burglaries.

Although recent estimates rank the sale of illegal narcotics as the criminal world’s greatest source of income, there is a problem with such assessments. These estimates do not even begin to measure the full impact of corporate price fixing and other criminal activities. Added to these costs are economic costs incurred by victims of crime and the costs of running the criminal justice system. Not considered at all in these economic estimates are the social and psychological costs to society and to crime victims (e.g., loss in productivity, medical and mental health care costs, and pain and suffering). Fear, mistrust, a curtailing of public activity, and a decline in the quality of life are but a few of the inestimable impacts of crime on society. Horror stories abound of the impact of crime on the forgotten figure in the criminal justice equation—the crime victim. As stated earlier, the costly Los Angeles riots of 1992 were dwarfed by the cost of the collapse of the nation’s savings and loans.

**Summary**

Criminology is the science or discipline that studies crime and criminal behavior. Major areas of investigation include criminal behavior, etiology (theories of crime causation), and the sociology of law and societal reaction; related areas include juvenile delinquency and victimology. Criminology also shares with the field of criminal justice the areas of policing, the courts, and corrections.

Knowledge is defined as one’s understanding of reality. This understanding is made possible through the creation of symbols or abstractions. Comte identified three stages in the progression of knowledge: the theological, metaphysical (philosophical), and scientific. Science combines the spirit of rationality of philosophy with the scientific method, which is characterized by the search for empirical proof. Criminology and sociology are more recent applicants for the scientific credentials already enjoyed by the physical sciences. Having its origins in the 18th century in Europe, particularly in the writing of Beccaria, who was influential in codifying modern law, criminology has largely become a 20th-century U.S. discipline. This is particularly reflected in the work of Sutherland, who has been identified as “the dean of criminology.”

Deviant behavior refers to activities that fall outside the range of normal societal toleration. Definitions of such activities are relative to time, place, and persons. Values are practices or beliefs that are prized in society and that are protected by norms, which are rules or prescribed modes of conduct. Sumner, in his classic work *Folkways*, identifies three types of norms: folkways, mores, and laws. While folkways are less serious customs or traditions, mores are serious norms that contain moral evaluations as well as penal sanctions. Both folkways and mores are examples of informal modes of control. Laws—codified rules of behavior—represent formal methods of attempting to ensure social control.
Acts *mala prohibita* are ones that are bad because they are prohibited, such as vagrancy and gambling; acts *mala in se* refer to those that are bad in themselves, such as murder, rape, and the like. Although not all criminal acts are viewed as deviant, neither are all deviant acts criminal. *Undercriminalization* involves the failure of the law to cover acts *mala in se*, and *overcriminalization* entails overextension of the law to cover acts that may more effectively be enforced through the mores. As societies undergo transition from *Gemeinschaft* (communal, sacred societies) to *Gesellschaft* (associational, secular societies), they must rely more on formal agencies of control. In order to be effective, laws require the support of the mores.

Manifest functions are intended or planned consequences of social arrangements, whereas latent functions refer to unintended or unanticipated consequences. Although the manifest function of Prohibition was to eliminate alcohol abuse, its latent functions were to encourage corruption, organized crime, and public disrespect. Durkheim viewed crime as a normal condition in society that served a positive function by the reactions it developed to encourage reaffirmation of values. Crime, a violation of criminal law, is characterized by politicality, specificity, uniformity, and sanctions. In explaining the origin of criminal law, the consensus model views it as reflecting agreement or public will, while the conflict model claims that it represents the interest of the most powerful group(s) in society. In reality, criminal law reflects elements of both models.

For official purposes, crimes are identified as felonies, misdemeanors, and (in some states) summary offenses (minor crimes that may be tried without benefit of jury). Although there is variation by state in the actual assignment to categories, a felony refers to a more serious crime that bears a penalty of at least 1 year in a state prison, whereas a misdemeanor is a less serious offense subject to a small fine or short imprisonment.

The issue of who defines crime should not be answered simply by accepting current definitions because to do so would permit others to define criminology’s subject matter. The crime problem is a growing international concern; the costs of crime are economic (which can only be estimated), psychological, and social in nature. The full social costs are inestimable.
Review Questions

TEST YOUR UNDERSTANDING OF CHAPTER CONTENT.
TAKE THE PRACTICE QUIZ edge.sagepub.com/hagan10e

1. What are some crimes that were not much regarded as problems in the past but are currently? Conversely, what are some crimes that were problems in the past and no longer loom as major concerns? Do you have any predictions of emerging, future crimes?

2. Besides Prohibition, what are some other social policies that have contained latent functions?

3. Do you think the American criminal justice system reflects a consensus or conflict model of law? Explain and defend your judgments.

4. Why don’t criminologists simply use the legal classifications of criminals in their studies of crime and criminal behavior?

5. What are the differences among criminal law, statutory law, case law, civil law, and administrative law?

Web Exercises

Using this chapter’s web sources, explore the field of criminology.

1. What are the largest professional associations in the field, and what did you find out about them?

2. What types of information are available on government sites such as the Bureau of Justice Statistics, CIA, National Institute of Justice, and the Office of Juvenile Justice and Delinquency Prevention?

3. Of what use is the National Criminal Justice Reference Service (NCJRS)?

4. What information does the World Factbook of Criminal Justice Systems include on countries throughout the world?

5. Using your web browser, search NCJRS for “FBI’s Most Wanted” and “crimes of the century.” Did you turn up anything new?
